Functions

Outline

Exercise

- Write a function `find_min_max(num1,num2,num3,num4)` that takes as **input parameters** four numbers and **returns** the minimum and maximum of those values.

Exercise

Given:

```
def main():  
    number=eval(input("Enter a number"))  
    print(square_num(number))
```

```
main()
```

Define square_num that takes as input, a number and returns its square.

Thank you!
